ISOBASE CRADLE
OWNER'S MANUAL

PERFORMANCE AND DESIGN

INSTALLATION TIPS

1.   Place laptop on maple platform and mark outline (or at least mark the corners) with masking tape or scotch tape. Then turn laptop upside down and find a suitable unobstructed mounting point for the three rounded brass footers; two should be placed under the rear of the laptop, one under the front, more or less centered. (Do not worry about the slightly rounded bottom found on most laptops. It helps laptops sit more firmly on the round top footers.) Lightly mark the three suitable mounting points.

2.   Measure the distances of the three marked mounting points relative to each of the corners. Then reproduce these distances from the tape-marked corners on the maple platform and mark.

3.   Attach the flat side of the brass footers at each marked point, using either the super glue provided or the brass screws. If you opt to use the screws, drill a pilot hole (7/32-inch) so that the wood screw threaded end of each screw can be properly threaded into the maple platform.

4.   Whenever you want to play music or watch video with improved quality, place the laptop on the three rounded footers. You will see an immediate improvement in color saturation and pastel shading, shadow detail and edge resolution. On the audio side, whether you're listening with headphones, computer speakers, or a full high end stereo system, you will her deeper and much cleaner bass, warmer and more detailed midrange and extended, cleaner treble. For best results when listening through a full stereo system, use our Purist Mini-to-RCA Adapter to plug into the

Mapleshade

headphone jack and then use our Ultrathin or Excalibur Ribbon Interconnects to connect the adapter to the live level input on you preamp or integrated amp.
